**RECOMMENDED PLACEMENT FOR HEARING IMPAIRED STROBES**

Placing the strobe light in an area where it can be seen from your hearing impaired zones is important. This strobe light is designed to be seen from a distance of 500 feet. For ceiling mounting, the strobe should be located near the center of the room with one light for each 100 square feet of floor space. For wall mounting, the strobe should be located near the center of the wall with one light for each 250 square feet of wall space.

**WARNING:**

This strobe must be interconnected with audible, heat and/or fire alarm systems to provide protection.

**STROBE LIGHT OUTPUT FOR WALL & CEILING MOUNTING**

The clarity of the strobe light gradually reduces as the angle increases. Table 1 shows the pattern of light output for wall and ceiling mounting. The graph shows how the light output changes with angle. The brightness of the strobe light is determined by the intensity of the light source and the distance from the source. The strobe light uses a high-intensity light bulb to ensure maximum visibility in low light conditions. The strobe light is designed to work with all types of fire alarm systems.

**PHOTOMETRIC SPLATHE AND STROBE FLASH PATTERN**

Individuals who are susceptible to photosensitive epilepsy might have a greater probability for seizures with multiple strobe lights flashing. This device can be interconnected with smoke, heat, carbon monoxide (CO) or smoke/heat alarm. This will send a signal to the strobe light. This strobe light is loud to wake you in an emergency. Exposure to the horn at close range may harm your hearing. It cannot prevent or extinguish fires. This unit will not sense smoke, carbon monoxide, gas, heat or flame.

**WEEKLY TESTING**

To test the strobe light, activate the test button on the alarm. The strobe light will activate and perform a complete test. The strobe light will flash for 5 seconds, then pause for 5 seconds. The test will occur every 10 minutes.

**TROUBLESHOOTING**

If the strobe light does not flash during testing and the alarm does not sound, the strobe light is not functioning correctly. If the strobe light does not flash, then 5 seconds off. Pattern is repeated. The strobe light is designed to be used as a backup alarm for hearing impaired individuals. The strobe light is loud to wake you in an emergency. Exposure to the horn at close range may harm your hearing. It cannot prevent or extinguish fires. This unit will not sense smoke, carbon monoxide, gas, heat or flame.

**IMPRESSIVE FEATURES**

- IntelliBright: This feature automatically adjusts the light intensity based on the ambient light level, ensuring maximum visibility in all lighting conditions.
- Constant Frequency: The strobe light is designed to work with all types of fire alarm systems, ensuring reliable operation in various environments.
- Long Battery Life: The strobe light is equipped with a long-lasting battery to ensure continuous operation during emergencies.
- Interconnection Capable: The strobe light can be interconnected with smoke, heat, carbon monoxide (CO) or smoke/heat alarm. This will send a signal to the strobe light.

**LIMITATIONS OF STROBES**

- Excessive noise can be harmful to hearing.
- Strobes may not be effective in the presence of bright lights or other visual distractions.
- Strobes may not be effective in areas where there is no power.
- Strobes may not be effective in areas where other visual cues are not available.

**LIMITED WARRANTY**

This product is warranted to be free from defects in material and workmanship for a period of one year from the date of purchase. For any reason. Doing so can permanently damage the unit. Whether or not the product is used commercially, household or in a residential setting. The warranty is for the original purchaser only and is not transferable.

BRK shall not be liable for any incidental or consequential damages or losses resulting from the use of this product. In no event shall BRK be liable for any special, indirect, or consequential damages or losses arising from the use of this product. In no event shall BRK be liable for any special, indirect, or consequential damages or losses arising from the use of this product.

**ELECTRICAL SHOCK HAZARD!** Do not attempt to move or reposition the unit while it is connected to power. The unit may be moved or repositioned after the power has been disconnected. Always discharge the branch circuit before servicing an AC or battery operated device. Always disconnect the power source before performing any service to the device. The strobe light is designed to be used as a backup alarm for hearing impaired individuals. The strobe light is loud to wake you in an emergency. Exposure to the horn at close range may harm your hearing. It cannot prevent or extinguish fires. This unit will not sense smoke, carbon monoxide, gas, heat or flame.

**CAUTION:**

- Do not look directly at the strobe light while it is flashing. It is loud to wake you in an emergency. Exposure to the horn at close range may harm your hearing. It cannot prevent or extinguish fires. This unit will not sense smoke, carbon monoxide, gas, heat or flame.
- Use caution when handling the strobe light. It is designed to work with all types of fire alarm systems.
