

**Uno/Duo™ – Open PAR30**

The concentric gimbal rings springing off the bottom edge of the chiseled monolith is a perfect example of "form follows function" in design. The monolith remains perfectly aligned with the trac while the gimbal ring mechanisms are free to provide broad aiming capability. On PAR30 versions, the monolith simply provides the pivot point for the gimbal rings and maintains a consistent appearance with the MR16 low voltage version. Framed Duo models share some of the same design details of the AVIO® series allowing both to be tastefully integrated into the same environment.
