

Installation Instructions for the Sure-Lites SRP and SRM LED Remotes

WARNING

Risk of Fire/Electric Shock

If not qualified, consult an electrician.

WARNING

Risk of Electric Shock

Disconnect power at fuse or circuit breaker before installing or servicing.

Important Safeguards

WHEN USING ELECTRICAL EQUIPMENT, BASIC SAFETY PRECAUTIONS SHOULD ALWAYS BE OBSERVED INCLUDING THE FOLLOWING.

1. READ AND FOLLOW ALL SAFETY INSTRUCTIONS
2. Do not use in hazardous locations, or near gas or electric heaters.
3. Do not let power supply cords touch hot surfaces.
4. Use caution when working with batteries. Battery acid can cause burns to skin and eyes. If acid is spilled on skin or in eyes, flush acid with fresh water and contact a physician immediately.
5. Do not use this equipment for other than the intended use.
6. Installation is to be performed only by qualified personnel.
7. Install in accordance with National Electric Code and local regulatory agency requirements.
8. The use of accessory equipment not recommended by the manufacturer may cause an unsafe condition.
9. Equipment should be mounted in locations and at heights where it will not readily be subjected to tampering by unauthorized personnel.
10. DO NOT EXCEED TOTAL OUTPUT RATING of source power equipment.
11. SAVE THESE INSTRUCTIONS

INSTALLATION

1. Turn off any power supply to source unit equipment. Disconnect battery.
2. Determine wire gage needed using the wire length calculation below. Run wires from source unit equipment to remote junction box. The SRP and SRM remote lights are designed to run at any DC voltage between 4.8 and 12VDC, with any polarity.
3. The SRP and SRM remote lights are weatherproof, and intended for indoor or outdoor mounting. For indoor use, the products can be mounted to a 4" round or octagon

junction box. For interior and exterior use, the products are intended to be mounted to a 4" round weather proof junction box.

4. To insure a weatherproof seal, apply a bead of silicone caulk around the base of the canopy where it attaches to the junction box.
5. Connect the wires from the unit equipment to the wires on the remote head. The SRP and SRM remote heads employ circuitry so they can be wired without regard for polarity.
6. Connect the canopy to the junction box using user supplied screws.
7. Reconnect the battery on the source unit equipment, and reapply power.
8. Energize the lamps by either removing power from the source unit equipment, or pressing the test button on the unit equipment.
9. Aim the heads by loosening the adjustment screws, and then re-tightening after the proper aim is attained. Do not adjust the head by loosening the thread of the knuckle to the canopy. This could allow water to enter the junction box in wet locations. See Figure 1.

OPERATION

Depress the test switch on the source unit equipment. The LED heads will light.

MAINTENANCE

None required.

CALCULATING MAXIMUM WIRE LENGTH TO REMOTES

The Sure-Lites LED remotes use a constant current driver that can accept any voltage from 4.8 to 12VDC. This means that the Sure-Lites LED remote will not dim over distance like a standard remote, until the total length of the circuit is too great, and the remote will not light at all. However, the standard voltage drop calculations for remotes will not work and a different calculation must be used.

Models	Heads	Max Mounting Height
SRP13, SRM13	One 1.25W head	19 Ft.
SRP25D, SRM25D	Two 1.25W heads	14 Ft.
SRP25, SRM25	One 2.5W head	28 Ft.
SRP50D, SRM50D	Two 2.5W heads	21 Ft.
SRP30, SRM30	One 5W head	32 Ft.
SRP60D, SRM60D	Two 5W heads	24 Ft.
